

Parameters							
Command	Synonyms	T	Mandatory	Order	Label	Extra	Description
<code>\br</code>	—	C	—	—	—	—	Inserts a line break within the same paragraph.
<code>\bold</code>	<code>\b</code> , <code>\strong</code>	C	{inline}	—	—	—	Sets the inline parameter in bold font.
<code>\emph</code>	<code>\i</code> , <code>\em</code>	C	{inline}	—	—	—	Sets the inline parameter in <i>emphasised</i> font.
<code>\mono</code>	<code>\m</code> , <code>\tt</code>	C	{inline}	—	—	—	Sets the inline parameter in monospaced (teletype) font.
<code>\caps</code>	—	C	{inline}	—	—	—	Sets the inline parameter in SMALL CAPS.
<code>\thru</code>	—	C	{inline}	—	—	—	Sets the inline parameter in strike-through style.
<code>\sup</code>	—	C	{inline}	—	—	—	Sets the inline parameter as ^{superscript} text.
<code>\sub</code>	—	C	{inline}	—	—	—	Sets the inline parameter as _{subscript} text.
<code>\mbox</code>	—	C	{inline}	—	—	—	Specifies that the inline parameter should not be split across lines.
<code>\link</code>	<code>\a</code>	C	{uri}{inline?}	—	—	—	Creates a link to the specified URI using the inline text for display.
<code>\cite</code>	—	M	{label}	—	—	—	Creates a link to the specified entry in the bibliography.
<code>\see</code>	—	M	{label}	—	—	—	Creates a link to the specified document note.
<code>\ref</code>	—	M	{label}	—	—	—	Creates a manual reference to the specified element.
<code>\sref</code>	—	M	{label}	—	—	—	Creates an automatic reference to the specified element.
<code>\mref</code>	—	M	{label}{inline}	—	—	—	Creates a reference to the specified element using the custom inline text for display.

Parameters							
Command	Synonyms	T	Mandatory	Order	Label	Extra	Description
<code>\item</code>	<code>\li</code>	C	—	—	—	—	Declares a new item in an ordered or unordered list.
<code>\describe</code>	<code>\dt</code>	C	{inline}	—	—	—	Declares the header for a new item in a description list.
<code>\bitmap</code>	—	C	{label}{raw}	—	—	align, frame, width	Inserts a bitmap image.
<code>\head</code>	—	C	—	—	—	—	Declares the start of the head rows in a tabular environment.
<code>\body</code>	—	C	—	—	—	—	Declares the start of a block of body rows in a tabular environment.
<code>\foot</code>	—	C	—	—	—	—	Declares the start of the foot rows in a tabular environment.
<code>\caption</code>	—	M	{inline}	—	—	—	Declares the caption for a wrapper (equation, printout, table, or figure).
<code>\who</code>	—	M	{inline}	—	—	—	Declares the author in a bibliography entry.
<code>\what</code>	—	M	{inline}	—	—	—	Declares the title in a bibliography entry.
<code>\where</code>	—	M	{inline}	—	—	—	Declares the resource where the bibliography entry may be located.
<code>\part</code>	—	M	{inline}	dep ²	opt	—	Declares a document part (the highest level division).
<code>\appendix</code>	—	M	—	—	opt	—	Declares the beginning of the document's appendix.
<code>\section</code>	<code>\h1</code>	M	{inline}	dep ²	opt	—	Declares a new document section.
<code>\subsection</code>	<code>\h2</code>	M	{inline}	dep ²	opt	—	Declares a new document sub-section.
<code>\subsubsection</code>	<code>\h3</code>	M	{inline}	dep ²	opt	—	Declares a new document sub-sub-section.
<code>\bibliography</code>	—	M	—	—	opt	—	Inserts all bibliography entries.
<code>\notes</code>	—	M	—	—	opt	—	Inserts all document notes.
<code>\toc</code>	—	M	—	—	opt	—	Inserts the document's table of contents.
<code>\title</code>	—	M	{inline}	—	—	—	Declares the document title.
<code>\subtitle</code>	—	M	{inline}	—	—	—	Declares a document subtitle.
<code>\rule</code>	<code>\hr</code>	M	—	—	—	—	Inserts an horizontal separator.

Parameters							
Command	Synonyms	T	Mandatory	Order	Label	Extra	Description
<code>itemize</code>	<code>ul</code>	C	—	—	—	bul	Declares an unordered list.
<code>enumerate</code>	<code>ol</code>	C	—	—	—	num	Declares an ordered list.
<code>description</code>	<code>dl</code>	C	—	—	—	—	Declares a description list.
<code>verse</code>	—	C	—	—	—	—	Declares a verse block.
<code>quote</code>	—	C	—	—	—	—	Declares a quotation block.
<code>mathtex</code>	—	C	—	—	—	align	Declares a math block in T _E X format.
<code>mathml</code>	—	C	—	—	—	align	Declares a math block in MATHML format.
<code>code</code>	—	C	—	—	—	align	Declares a verbatim block containing source-code.
<code>tabular</code>	—	C	{raw}	—	—	align	Declares a tabular environment.
<code>verbatim</code>	—	C	—	—	—	align	Declares a verbatim block with ASCII-art.
<code>subpage</code>	—	C	—	—	—	align	Declares a sub-page containing a child document.
<code>pull</code>	—	M	—	—	—	align	Declares a pull-quote.
<code>boxout</code>	—	M	{inline?}	—	—	align	Declares a boxout with some inline text as title.
<code>equation</code>	—	M	—	opt	dep ¹	—	Declares a numbered wrapper around a math block.
<code>printout</code>	—	M	—	opt	dep ¹	—	Declares a numbered wrapper around a code block.
<code>table</code>	—	M	—	opt	dep ¹	—	Declares a numbered wrapper around a tabular environment.
<code>figure</code>	—	M	—	opt	dep ¹	—	Declares a numbered wrapper around a verbatim, bitmap, or sub-page figure.
<code>bib</code>	—	M	—	—	—	—	Declares a bibliography entry.
<code>note</code>	—	M	—	—	—	—	Declares a document note.
<code>abstract</code>	—	M	—	—	—	—	Declares a block of text to be the document's abstract.
